Summary

Backend-focused Computer Science student seeking a **Backend Developer Internship**. Experienced in **Python** development, FastAPI, Laravel, RESTful APIs, CRUD operations, secure backend development, RBAC, JWT (JSON Web Tokens), and database management using MySQL and MongoDB. Strong foundation in Data Structures, Algorithms, and privacy-focused workflows. Skilled in designing scalable, maintainable, and secure backend systems.

Skills

Languages: Python, PHP, JavaScript, C++, C#

Backend Frameworks: FastAPI, Laravel, Node.js, .NET (WinForms)

Frontend / Mobile: React, Flutter

Databases: MySQL, MongoDB

Backend & Security: RESTful APIs, CRUD, RBAC, JWT (JSON Web Token), Authentication/Authorization, SQL Injection Prevention, Secure Backend Development, API Development

Tools & Others: Git (Version Control), SQLAlchemy, Pandas, Postman

Experience

Software Engineer Intern

Mar 2025 – May 2025

Developers Hub Corporation (Remote)

- Designed and implemented 15+ REST API endpoints using Laravel and MySQL with RBAC-based access control for hierarchical user roles.
- Integrated token-based authentication (Sanctum/JWT) to secure API routes and protect user-generated content.
- Implemented server-side validation and MIME-type filtering to reduce risk of malicious file uploads.
- Followed secure coding best practices for CRUD operations, API development, and backend workflows.
- Collaborated in an agile backend development environment using Git-based version control and weekly sprint reviews.

Teaching Assistant — Object-Oriented Programming

Feb 2024 – Apr 2024

COMSATS University Islamabad

- Mentored 20+ students in C++ and core OOP concepts including memory management, inheritance, and polymorphism.
- Reviewed and evaluated 50+ programming assignments, providing structured feedback on code efficiency and best practices.
- Conducted weekly debugging sessions to strengthen students' logical reasoning and problem-solving skills.

Core Technical Projects

CloudSight — AI-Driven Data Governance Platform (Final Year Project)

- Developing a backend platform to scan cloud storage environments for sensitive information and PII.
- Built Python-based modules for automated data classification and sensitivity tagging.
- Designed an administrative dashboard to monitor compliance risks across multiple storage buckets.
- Integrated AI-based filtering mechanisms to reduce false positives in sensitive data detection.
- Followed secure backend development practices and API-first architecture.

De-Identify — Privacy PDF Redaction Tool (Python, FastAPI)

- Developed a FastAPI-based backend service for automated PII detection and secure PDF redaction.
- Implemented Regex-based pattern matching for CNIC, email, and phone number detection with irreversible redaction logic.
- Designed a zero-persistence architecture using temporary UUID-based file handling and automated cleanup jobs.
- Built secure CRUD endpoints to handle file uploads and redacted downloads.

Additional Projects

FinInsight — Transaction Analytics Dashboard (FastAPI, SQLAlchemy)

- Developed a dual-server architecture with a FastAPI backend for data processing and a Streamlit frontend for visualization.
- Built SQLAlchemy ORM queries to aggregate financial data and generate real-time spending insights.
- Leveraged Pandas for data cleaning and transformation of raw transaction logs into structured analytical reports.
- Implemented secure API endpoints with proper access control.

Student Performance Predictor (Python, Machine Learning)

- Built a Linear Regression model to predict student performance using academic datasets.
- Applied data preprocessing and feature selection techniques to prepare training data.

Weather Application (Flutter, REST APIs)

- Developed a mobile application fetching and displaying real-time weather data using external APIs.
- Designed a responsive UI and optimized API calls for improved performance.

Education

Bachelor of Science in Computer Science

2023 – 2027 (Expected)

COMSATS University Islamabad, Pakistan

- 7th Semester Student
- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Artificial Intelligence, Object-Oriented Programming

Achievements

- Provincial Runner-up, All-Sindh Oratory Contest — Secured 2nd place for excellence in professional communication.
